

GIAIC: HACKATHON

TASK: 2

BUILDING DYNAMIC FRONTEND COMPONENTS FOR YOUR SWORLD:

- 1. Product Display:** Create dynamic components using React to render product details from your database (e.g., name, price, image).
- 2. Filtering & Sorting:** Implement dynamic filtering and sorting options that update the displayed products based on user input (price, type, etc.).
- 3. Product Details Page:** Build a dynamic page that fetches product details and displays images, descriptions, and reviews.

4. Cart System: Develop an interactive cart system that updates in real-time.

5. API Integration: Use APIs to fetch product data dynamically.
